Diagnosis, treatment and evolution of the Budd-Chiari syndrome: a single center experience.

Solari J, Bandi JC, Galdame O, Marciano S, Mullen E, Garcia MR, Nucifora E, de Santibañes E, Gadano A.

Unidad de Trasplante Hepático, Hospital Italiano de Buenos Aires, Argentina.

Abstract

The Budd-Chiari syndrome is a low-prevalence disease due to an hepatic outflow obstruction. It is associated with procoagulant status and liver transplantation is one of the therapeutic tools for the treatment. To evaluate the etiology, presenting form, treatment and evolution of patients with Budd-Chiari syndrome.

Etiology of hepatocellular carcinoma in Argentina: results of a multicenter retrospective study.

Hospital Nacional Prof A. Posadas, El Palomar, provincia de Buenos Aires.

Abstract

Incidence and etiology of hepatocellular carcinoma (HCC) are variable around the world, depending mainly on the prevalence of chronic hepatitis B carriers in each region. No study has been published analyzing epidemiological features of patients with HCC in Argentina. The aim of this retrospective study was to describe demographical and etiological results in a series of 587 consecutive patients with HCC diagnosed in 15 Hepatology and Gastroenterology Units distributed all around our country.
